

GOLDEN GROVE OPERATIONS PTY LTD

06/03/2024

Att: [REDACTED]
Vac West Industrial

As per our discussions we are urgently seeking the ability for Vac West Industrial to store and transport our water to Golden Grove Mine site. The change in scope comes from the decision to move towards Container style shipping where we will use rotainer (containers that are rotated in the hull of the ship to reduce dust). As we change to this style shipping it means that we are moving to a different berth at the Midwest Ports.

Our previous shed, which has the current water storage tanks that Vac West Industrial currently transport to site will be handed over to a new Lessee. In saying this we no longer have any water storage ability for L150 - Industrial Wash Water created from machine wash down etc.

We are needing to engage Vac West Industrial to provide a storage solution for the L150 - Industrial Wash Water so that we can store enough water to warrant your road train to head to our mine site and dispose of.

Kind Regards,
