#### Amendment

The Chief Executive Officer (CEO) of the Department of Water and Environmental Regulation (DWER) has amended the above Licence in accordance with section 59 of the *Environmental Protection Act 1986* (EP Act) as set out in this Amendment Notice. This Amendment Notice constitutes written notice of the amendment in accordance with section 59B (9) of the EP Act.

Tim Gentle MANAGER – RESOURCE INDUSTRIES REGULATORY SERVICES

Officer delegated under section 20 of the Environmental Protection Act 1986

# **Definitions and interpretation**

# **Definitions**

In this Amendment Notice, the terms in Table 1 have the meanings defined.

#### Table 1: Definitions

| Term                          | Definition  |  |
|-------------------------------|---|--|
| ACN                           | Australian Company Number   |  |
| АММР                          | Airborne Materials Management Plan (2010) revised on 26<br>September 2017   |  |
| Annual period                 | means the inclusive period from 1 September until 31 August in the following year.  |  |
| Category/ Categories/<br>Cat. | categories of Prescribed Premises as set out in Schedule 1 of the EP Regulations  |  |
| CEO                           | for the purpose of correspondence means;<br>Chief Executive Officer<br>Department Administering the <i>Environmental Protection Act 198</i><br>Locked Bag 33<br>CLOISTERS SQUARE WA 6850<br>Email: <u>info@dwer.wa.gov.au</u> ; |  |
| Delegated Officer             | an officer delegated under section 20 of the EP Act   |  |

| Prescribed Premises | has the same meaning given to that term under the EP Act.  |  |
| Premises            | refers to the premises to which this Decision Report applies, as specified at the front of this Decision Report.   |  |
| Risk Event          | as described in Guidance Statement: Risk Assessment  |  |
| RL                  | refers to the term 'Relative Level' and is the height or elevation<br>above the point adopted as the site datum for the purpose of<br>establishing levels. |  |
| TSF                 | Tailings Storage Facility  |  |
| Wall lift 3         | means the "wall lift 3" as indicated in Schedule 2.  |  |
| Wall lift 4         | means the "wall lift 4" as indicated in Schedule 2.  |  |

# **Amendment Notice**

This amendment is made pursuant to section 59 of the *Environmental Protection Act 1986* (EP Act) to amend the Licence issued under the EP Act for a prescribed premises as set out below. This notice of amendment is given under section 59B (9) of the EP Act.

This Licence amendment notice assesses the construction of two wall lifts to the existing Tailings Storage Facility (**TSF**) cell 1, followed by operations, to service the Spodumene wet process plant at Galaxy Lithium Australia Limited (**Galaxy**) located at Ravensthorpe. The two TSF wall lifts proposed are;

- A wall lift of 5 metres from RL 275.3m to RL 280.3m and identified as 'wall lift 3'; plus,
- A wall lift of 4.2 metres from RL 280.3m to RL 284.5m and identified as 'wall lift 4'.

The proposal to construct and operate **TSF** cell 1 will not lead to increased annual production capacity currently at 2.0 million tonnes per annum (Mtpa). The annual tonnage of **TSF** waste to be deposited is estimated to be 324,000 tonnes per annum.

The following DWER guidance statements have informed the decision made on this amendment;

- Guidance Statement: Regulatory Principles (July 2015)
- Guidance Statement: Setting Conditions (October 2015)
- Guidance Statement: Decision Making (February 2017)
- Guidance Statement: Risk Assessment (February 2017)
- Guidance Statement: Environmental Siting (November 2016)

# **Amendment description**

On 18 October 2018, **Galaxy** submitted a licence amendment application which is the subject of this Amendment Notice. Supporting documents to the licence amendment application included premises maps, TSF cell 1 and cell 2 design report (2010), Galaxy assessment of emissions during construction, latest version of the Galaxy Operational Noise Management Plan (ONMP)

plus Airborne Material Management Plan (AMMP). TSF cell 1 wall lift 3 and 4 are expected to take 10 to 12 weeks per lift to construct. During the construction the wet plant will continue operations. Each wall lift is expected to be constructed separately however the lifts may occur consecutively if the soil material used for construction is deemed suitable. The term of this Amendment Notice coincides with the term of the existing licence.

This Amendment Notice authorises one **TSF wall lift 3** to a maximum height of RL 280.3 metres. The **Galaxy** throughput capacity of 2.0 Mtpa for Category 5 processing and beneficiation of metallic and non-metallic ore activities will not change due to this construction. Consideration of the second proposed wall life (wall lift 4) will be deferred pending receipt of further information.

DWER reviewed the **Application** and **supporting documentation** and confirmed the key TSF infrastructure and equipment that will be assessed during construction. This has been summarised in the Works Approval history discussion below. The operations of the TSF will also be assessed by **this report** considering the current licence conditions.

The emissions associated with the construction and operation of TSF 1 wall lift 3 will be risk assessed to determine impacts upon the environment and public health (see Table 9 below)

# Works Approval history

**Works Approval W4533/2009/1** was granted on 19 June 2009 and extended on 17 January 2013 to expire on 21 June 2018. The extension of works approval was to allow for construction of TSF Cell 1 wall lifts 3 & 4 whilst ensuring the works approval remain active. Unfortunately, the Works Approval expired before the wall lifts were completed. This licence amendment will assess TSF Cell 1 wall lift 3 and will use the expired works approval assessment plus previous documentation to inform **this report**.

TSF Cell 2 and any subsequent wall lifts will be addressed after the **Licence Holder** submits a new Works Approval application. Any changes to TSF Cell 2 from that which was initially proposed by Works Approval W4533/2009/1 will be reassessed following receipt of the new application.

Historically, Galaxy applied to amend the initial Works Approval due to two significant changes with the tailings management system. The changes included;

- The wet plant process would produce an intermediate product with benign tailings, ie Lithium Carbonate circuit would no longer be constructed; and,
- A drainage system incorporated into the TSF design would control and reduce seepage by around 84% (seepage model prediction) in lieu of original TSF liner permeability of 1x10<sup>-9</sup> m/s being unachievable.

The TSF seepage control and collection was designed with an upstream toe drain, basin compaction, underdrainage system and cutoff trench.

# **Other approvals**

The Licence Holder has provided the following information relating to other approvals as outlined in Table 2.

#### Table 2: Relevant approvals

| Legislation  | Number  | Approval   |
|--|---|--|
| Mining Act 1978 (WA)<br>(Department of Mines, Industry<br>Regulation and Safety) | Registration Id: 22377 and 26415<br>(TSF) plus subsequent<br>Amendments | Ravensthorpe Spodumene Project<br>was granted mining approval on 4<br>November 2009 and Mining<br>Tenement M74/244 was granted on<br>24 December 2009. |

| Rights in Water and Irrigation Act   | GWL167439(5) – expire 18/2/2026   | Process plant – 1.095 GL/yr                                     |
|--|---|---|
| 1914 (WA)  | CAW167437(1) -  | Construct wells   |
| (Department of Water and   | CAW169547(1) –  | Construct wells   |
| Environmental Regulation)  | CAW170586(1) -  | Construct wells   |
| Environmental Protection Act 1986<br>(WA)<br>(delegated to Department of Mines,<br>Industry Regulation and Safety) | Native Vegetation Clearing Permit<br>CPS #3045/5- Granted 22/08/2009<br>expiring on 31/07/2024. | Approval to clear 15 ha within part of Mining Tenement M74/244. |

Previous applications were referred for advice to the DWER's Environmental Protection Authority Services (EPA-S) who responded concluding that further consideration for an increase in annual throughput capacity up to 2.0 Mtpa under Part IV of the EP Act is unnecessary. This application will not increase the throughput capacity above 2.0 Mtpa.

# **Amendment history**

Table 3 provides the amendment history for L8469/2010/2.

 Table 3 Licence amendments

| Instrument   | Issued     | Amendment  |  |  |
|--------------|------------|--|--|--|
| W4533/2009/1 | 19/06/2009 | New works approval for premises construction   |  |  |
| W4533/2009/1 | 8/07/2010  | Works approval amendment (removal of Phase 2)  |  |  |
| W4533/2009/1 | 11/10/2010 | Works approval amendment (removal of spill trays under conveyors)  |  |  |
| L8469/2010/1 | 14/10/2010 | New licence issued for premises operation  |  |  |
| L8469/2010/1 | 7/07/2011  | Licence amendment (noise management requirements)  |  |  |
| L8469/2010/1 | 24/05/2012 | Licence amendment (TSF manual revision)  |  |  |
| W4533/2009/1 | 24/05/2012 | Works approval amendment (extension to expiry for TSF lifts)   |  |  |
| W4533/2009/1 | 17/01/2013 | Works approval amendment (reflux classifier)   |  |  |
| L8469/2010/2 | 3/10/2013  | Licence reissue  |  |  |
| L8469/2010/2 | 4/09/2014  | Licence amendment (groundwater management and conversion to latest DER licence format).  |  |  |
| L8469/2010/2 | 29/04/2016 | Amendment Notice 1 granted to extend expiry date to 13 October 2029  |  |  |
| L8469/2010/2 | 02/06/2016 | Licence amendment application to include construction of temporary tailings<br>stockpile area and inclusion of Reflux classifiers and Lithium Belt Filter into the<br>wet process plant circuit.   |  |  |
| L8469/2010/2 | 27/03/2018 | Amendment Notice 2 granted to increased throughput capacity, remove<br>construction Compliance Report requirements plus reference new acoustics<br>reports and monitoring, minor changes to premise operation conditions, minor<br>changes to monitoring of inputs and outputs and replace Premises maps in<br>Schedule 1. This amendment includes the transfer of Licence from Galaxy<br>Resources Limited to Galaxy Lithium Australia Limited. |  |  |
| L8469/2010/2 | 21/06/2018 | Amendment Notice 3 granted to increase throughput capacity to 2.0 Mtpa, construct, install and commission the feed upgrade circuit, Ultrafine Dense Mass Separation (DMS) circuit including a Wet High Intensity Magnetic Separator (WHIMS) for Tantalite recovery, secondary float re-liberation circuit including a dewatering screw classifier and upgrades to the product circuit.   |  |  |
| L8469/2010/2 | 25/01/2019 | Amendment Notice 4 granted to include TSF cell 1 wall lift 3 to final RL height of 280.3m.   |  |  |

# Location and receptors

Table 4 lists the relevant sensitive receptors in the vicinity of the primary activity with a location plan enclosed in Figure 1 of this report.

| Residential and sensitive premises     | Distance from Prescribed Premises   |
|--|---|
| Farm residence #1                      | Located 1.850 km north west of process plant and residence has been acquired by Galaxy. |
| Demountable accommodation #2           | Located 2.160 km south south east of process plant                                      |
| Residence #4                           | Located 3.430 km east of the process plant and residence owned by the Applicant.        |
| Farm residence #5                      | Located 2.215 km north west of process plant  |
| Residence #6                           | Located 2.560 km south east of process plant.   |
| Accommodation Camp #8                  | Located 2.620 km south east of process plant.   |
| Farm residence #9                      | Located 1.975 km south of process plant.  |
| Farm residence #10                     | Located 2.320 km south west of process plant.   |
| Residential – Township of Ravensthorpe | Located ~ 2.650 km east southeast of process plant.                                     |

#### Table 4: Receptors and distance from prescribed activity

Table 5 below lists the closest relevant environmental receptors in the vicinity of the prescribed Premises relevant to the proposed amendment.

| Environmental receptors   | Distance from Prescribed Premises   |  |
|---|---|--|
| Kondinin-Ravensthorpe Groundwater<br>Area (GWA)                     | Ravensthorpe Mt Cattlin Spodumene project is part located in the GWA  |  |
| Groundwater Production Bores  | There are no other registered groundwater users within 3 km of the Mt Cattlin Spodumene project.  |  |
| Mt Cattlin Creek  | Directly east of prescribed premises  |  |
| Remnant native vegetation<br>(Habitat for threatened fauna species) | Directly east of prescribed premises  |  |
| Esperance Coastal Hydrographic<br>Catchment                         | Ravensthorpe Mt Cattlin Spodumene Project is located in the Cattlin<br>Creek catchment bounded by Jerdacuttup River and Phillips River. |  |
| Native Title Claims   | Ravensthorpe Mt Cattlin Spodumene Project is located in the; Single Noongar Claim (Area 1) – Cth claim                                  |  |
|   | Wagyl Kaip – NNTT registered  |  |
|   | Southern Noongar – NNTT registered  |  |
| Clearing Regulation - Environmentally<br>Sensitive Areas (ESA's)    | Premises is located 5.4 km south and 8.6 km north east of restricted clearing Environmentally Sensitive Area.                           |  |
| Parks and Wildlife managed lands and water                          | Overshot Nature Reserve located 2 km north north-west of the Mt Cattlin Spodumene project.  |  |
|   | Vacant Crown Lands located immediately east of the project.   |  |
| Ecological communities (TEC's and PEC's)                            | Closest Threatened Ecological Community (TEC) is located 1.3km south of the prescribed Premises boundary and 3km south east of th TSF.  |  |
|   | Priority Ecological Community (PEC) is 6.7km east.  |  |
| Threatened / Priority Flora   | Threatened flora located 4km northeast of the prescribed Premises boundary (eastern boundary).  |  |
|   | Priority flora located 3.7km south east of the southern boundary.   |  |
| Threatened / Priority Fauna   | Closest Threatened fauna recorded immediately east in the vacant crown lands from the Prescribed Premises boundary.                     |  |

Table 5: Environmental receptors and distance from activity boundary

# **TSF Groundwater quality monitoring data**

There are 7 groundwater monitoring bores and 2 groundwater seepage recovery bores directly downgradient of the TSF. Figure 1 indicates the location of each TSF monitoring and seepage recovery bore.

The depth to groundwater in the area surrounding the TSF varies from 4.5 to 5 mbgl and is limited by licence condition 1.2.7 requiring the TSF monitoring bores remain greater than 3 mbgl. The local shallow aquifer is saline (salinity equivalent to seawater or greater with Electrical Conductivity (EC) between 36,000  $\mu$ S/cm to 48,100  $\mu$ S/cm and Total Dissolved Solids (TDS) between 25,560 mg/L to 35,900 mg/L. (AER 2015 - 2018)

The TSF groundwater data indicate low pH and increasing metals and other elements (Fe, Li, B & FI), whilst Galaxy's tailings are alkaline. The increased contamination of groundwater may be caused by the seepage recovery bores drawdown exposing potential ASS. The drawdown associated with the seepage recovery bores MB3A and WTD28 may have resulted in groundwater acidity, possibly from acid sulfate soils (ASS) being exposed, resulting in increased concentrations of lithium (Li) boron (B) and fluoride (FI) in the groundwater. Also, recycled and reused groundwater used at the process plant may be progressively increasing metalloid concentration in the tailings returning TSF seepage to the local groundwater.

The applicant has advised (18 January 2019) that the recorded low pH values are likely to be a sampling artifact (ferrolysis reaction) due to insufficient flushing (or no flushing) of the bores prior to sampling. An improvement condition will therefore be added to this amendment requiring an independent review of the current bore monitoring procedure to determine whether this is in fact the case. A second improvement condition will require the applicant to provide a report on the current TSF water balance.

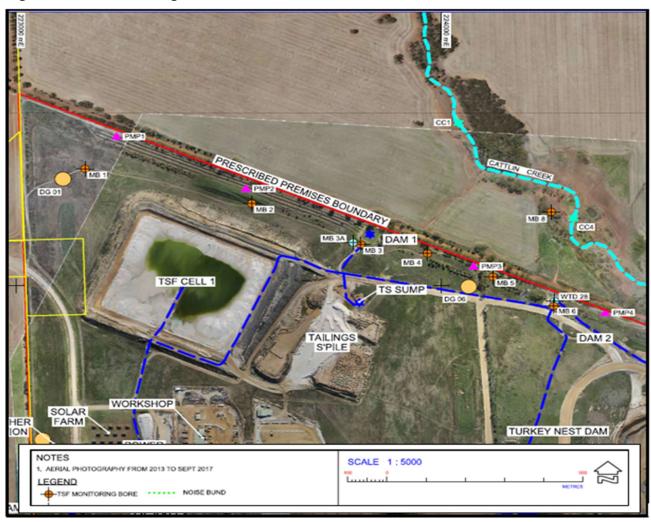

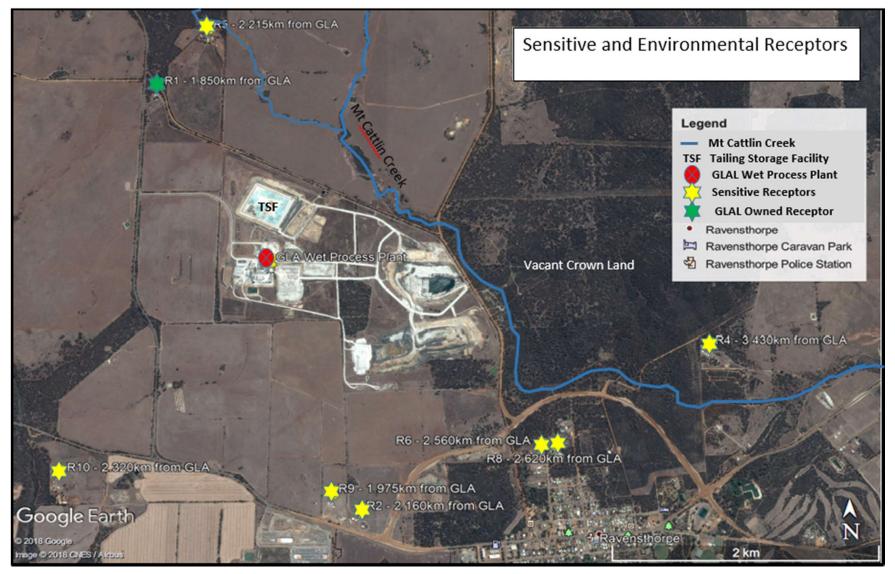

Figure 1: TSF Monitoring Bore locations

#### Figure 2: Plan indicating location of sensitive and environmental receptors

**Risk Assessment Methodology** The risk assessment following utilizes the risk rating matrix as shown in Table 6, recently updated in accord with DER's Guidance Statement: Risk Assessments (February 2017). The risk criteria used in the matrix below is further defined in Table 7 and 8 below.

| Likelihood     | Consequence |                                    |        |         |         |  |  |
|----------------|-------------|------------------------------------|--------|---------|---------|--|--|
|                | Slight      | Slight Minor Moderate Major Severe |        |         |         |  |  |
| Almost certain | Medium      | High                               | High   | Extreme | Extreme |  |  |
| Likely         | Medium      | Medium                             | High   | High    | Extreme |  |  |
| Possible       | Low         | Medium                             | Medium | High    | Extreme |  |  |
| Unlikely       | Low         | Medium                             | Medium | Medium  | High    |  |  |
| Rare           | Low         | Low                                | Medium | Medium  | High    |  |  |

#### Table 6 Risk Rating Matrix

DWER will undertake an assessment of the consequence and likelihood of the Risk Event in accordance with Table 7 following:

| Table 7: Risk criteria definitions (taken from DER's Guidance Statement: Risk |
|---|
| Assessments)  |

| Likelihood Consequence   |  |                | nce   |   |  |  |
|--|--|----------------|---|---|--|--|
| The following criteria has been<br>used to determine the<br>likelihood of the Risk Event<br>occurring. |  | The following: | The following criteria has been used to determine the consequences of a Risk Event occurring:   |   |  |  |
|  |  |                | Environment   | Public health* and amenity<br>(such as air and water quality,<br>noise, and odour)  |  |  |
| Almost<br>Certain  | The risk event is<br>expected to<br>occur in most<br>circumstances | Severe         | <ul> <li>onsite impacts: catastrophic</li> <li>offsite impacts local scale: high<br/>level or above</li> <li>offsite impacts wider scale:<br/>mid-level or above</li> <li>Mid to long-term or permanent<br/>impact to an area of high<br/>conservation value or special<br/>significance<sup>A</sup></li> <li>Specific Consequence Criteria<br/>(for environment) are significantly<br/>exceeded</li> </ul> | <ul> <li>Loss of life</li> <li>Adverse health effects: high<br/>level or ongoing medical<br/>treatment</li> <li>Specific Consequence<br/>Criteria (for public health) are<br/>significantly exceeded</li> <li>Local scale impacts:<br/>permanent loss of amenity</li> </ul> |  |  |
| Likely   | The risk event<br>will probably<br>occur in most<br>circumstances  | Major          | <ul> <li>onsite impacts: high level</li> <li>offsite impacts local scale: mid-<br/>level</li> <li>offsite impacts wider scale: low<br/>level</li> <li>Short-term impact to an area of<br/>high conservation value or<br/>special significance^</li> <li>Specific Consequence Criteria<br/>(for environment) are exceeded</li> </ul>   | <ul> <li>Adverse health effects: midlevel or frequent medical treatment</li> <li>Specific Consequence Criteria (for public health) are exceeded</li> <li>Local scale impacts: high level impact to amenity</li> </ul>   |  |  |
| Possible   | The risk event<br>could occur at<br>some time                      | Moderate       | <ul> <li>onsite impacts: mid-level</li> <li>offsite impacts local scale: low<br/>level</li> <li>offsite impacts wider scale:<br/>minimal</li> <li>Specific Consequence Criteria<br/>(for environment) are at risk of<br/>not being met</li> </ul>   | <ul> <li>Adverse health effects: low<br/>level or occasional medical<br/>treatment</li> <li>Specific Consequence<br/>Criteria (for public health) are<br/>at risk of not being met</li> <li>Local scale impacts: mid-<br/>level impact to amenity</li> </ul>                |  |  |

| Likelihood   | lood Consequence  |   |  |   |  |
|--|---|---|--|---|--|
| The following criteria has been<br>used to determine the<br>likelihood of the Risk Event<br>occurring. |   | The following criteria has been used to determine the consequences of a Risk Event occurring: |  |   |  |
|  |   | Environment   |  | Public health* and amenity<br>(such as air and water quality,<br>noise, and odour)  |  |

| Rare   | The risk event<br>may only occur in<br>exceptional<br>circumstances   | Slight  | onsite impact: minimal     Specific Consequence Criteria     (for environment) met   | <ul> <li>Local scale: minimal to<br/>amenity</li> <li>Specific Consequence<br/>Criteria (for public health) met</li> </ul>  |  |

<sup>^</sup> Determination of areas of high conservation value or special significance should be informed by the *Guidance Statement: Environmental Siting.* 

\* In applying public health criteria, DWER may have regard to the Department of Health's *Health Risk Assessment (Scoping) Guidelines.* 

"onsite" means within the Prescribed Premises boundary.

DWER will determine the acceptability and treatment of Risk Events in accordance with the Risk treatment table 8 below:

#### Table 8: Risk treatment table

| Rating of Risk<br>Event | Acceptability  | Treatment   |
|-------------------------|--|---|
| Extreme                 | Unacceptable.  | Risk Event will not be tolerated. DWER may refuse application.  |
| High                    | May be acceptable.<br>Subject to multiple regulatory controls. | Risk Event may be tolerated and may be<br>subject to multiple regulatory controls. This<br>may include both outcome-based and<br>management conditions.                                 |
| Medium                  | Acceptable, generally subject to regulatory controls.          | Risk Event is tolerable and is likely to be<br>subject to some regulatory controls. A<br>preference for outcome-based conditions<br>where practical and appropriate will be<br>applied. |
| Low                     | Acceptable, generally not controlled.                          | Risk Event is acceptable and will generally not be subject to regulatory controls.  |

### **Risk assessment**

Table 9 below describes the Risk Events associated with the amendment consistent with the *Guidance Statement: Risk Assessments*. This table identifies whether the emissions present a material risk to public health or the environment, requiring regulatory controls.

|   |  | Ris   | k Event  |                                   |   |                        |                      |      |   |
|---|--|---|--|-----------------------------------|---|------------------------|----------------------|------|---|
| Source/A  | Activities   | Potential emissions   | Potential<br>receptors   | Potential pathway                 | Potential<br>adverse<br>impacts             | Consequen<br>ce rating | Likelihood<br>rating | Risk | Reasoning   |
|   |  | <i>Dust:</i><br>Release of<br>particulate<br>matter from<br>construction  | Nearby<br>Residents:<br>Located<br>greater than<br>1.8 km north<br>west from<br>process and<br>crushing plant. | Air:                              | Health and<br>amenity<br>impacts            | Slight                 | Possible             | Low  | Dust generated during construction will be<br>managed in accordance with latest version<br>of Airborne Material Management Plan<br>(AMMP) 2018 conditioned by the licence<br>(2.1.1 & 2.1.2) that includes a stop activity<br>clause during inclement weather<br>conditions.<br>Water trucks will be utilized during<br>construction activities plus speed limits                             |
| Cat 5<br>Processing<br>or<br>beneficiation<br>of metallic or<br>non-metallic<br>ore | Construction<br>of TSF Cell 1<br>wall lift 3 & 4<br>earth works,<br>plant and<br>vehicle<br>movements. | activities<br>including<br>earthworks,<br>vehicle<br>movements<br>and civil<br>works.                                 | Local Flora<br>species<br>Located<br>greater than<br>1km east of<br>wet process<br>plant                       | Wind<br>dispersion                | Impact to<br>native<br>vegetation<br>health | Slight                 | Possible             | Low  | implemented to reduce dust generation by<br>vehicles on internal mine roads.<br>The general provisions of the EP Act will<br>apply during construction activities.<br>The overall risk rating of construction dust<br>impacting residence and local flora is<br>assessed as "low" because dust generated<br>during construction will be short term and<br>sufficient distance from receptors. |
|   |  | Noise:<br>Noise<br>associated<br>with<br>equipment<br>and<br>machinery<br>plus vehicles<br>use during<br>construction | Nearby<br>Residents:<br>Located<br>greater than<br>1.8 km north<br>west from<br>process and<br>crushing plant. | <b>Air:</b><br>Wind<br>dispersion | Health and<br>amenity<br>impacts            | Slight                 | Possible             | Low  | Noise generated during construction<br>activities is expected to comply with the<br>provisions of the Environmental Protection<br>(Noise) Regulations 1997 (WA).<br>Controls imposed by the Licence Holder<br>during construction will be implemented as<br>described in the latest version of the<br>Operational Noise Management Plan<br>(ONMP) 2018.                                       |

|  |                        | Risk  | Event   |  |  |                    |                      |        |  |
|--|------------------------|---|---|--|--|--------------------|----------------------|--------|--|
| Source//   | Activities             | Potential emissions   | Potential<br>receptors  | Potential pathway  | Potential<br>adverse<br>impacts  | Consequence rating | Likelihood<br>rating |        | Reasoning  |
| Category 5<br>Processing<br>or<br>beneficiation<br>of metallic or<br>non-metallic<br>ore | Tailings<br>deposition | Dust:<br>Generated as a<br>result of finer<br>tailings being<br>deposited                         | Soil and<br>vegetation<br>adjacent to<br>areas<br>Groundwater                 | Air:<br>Wind<br>dispersion   | Adverse<br>impacts to<br>vegetation<br>health  | Moderate           | Rare                 | Medium | The overall risk rating of dust being<br>generated as a result of finer tailings<br>being deposited is determined as<br>"medium" as the tails will be wet<br>during operations. Also, any dry<br>tailings will be suppressed using<br>water or suppression products during<br>dry high wind weather conditions,<br>daily inspections will be completed<br>during operations as required by<br>condition 2.1.2 are described as<br>management controls in the most<br>recent version of AMMP.<br>The plant upgrade approved by<br>Amendment Notice 3 also<br>considered course rejects (dry) being<br>separated from tailings that reduced<br>inputs to the TSF but increased<br>disposal to the waste dump areas.<br>Therefore a new improvement<br>condition requiring leachate testing of<br>fine tailings and course rejects. |

Further consideration of this<br>potential risk will be deferred pending<br>further information and assessment.<br>Note – any risk will not be altered by<br>the proposed TSF lifts.  |

### Decision

The potential emissions associated with the construction and operation of TSF Cell 1 wall lift 3 at the Galaxy Spodumene project are;

- Nuisance noise during TSF construction activities;
- Fugitive dust from TSF construction activities;
- Fugitive dust generated from the TSF during operations;
- Release of tailings caused by leaks or failures of infrastructure;
- Tailings seepage to shallow groundwater aquifer; potential to cause contamination of groundwater or impact on adjacent Cattlin creek system;
- Potential for increasing concentration of contaminants (such as lithium, fluoride, boron) in the groundwater in vicinity of TSF. Exposure of acid sulfate soils from groundwater seepage recovery.
- Tailings or return water spillage from failed pipes, pumps and overflow; and,
- TSF supernatant ingested by local birds and other wildlife.

The Delegated Officer has considered the overall risk of the emissions upon local receptors together with Galaxy's proposed management controls and determined the proposed amendments will not result in emissions which are unacceptable to public health or the environment and therefore grants the Licence amendment to complete construction of TSF cell 1 wall lift 3.

The Licence is amended by;

- Add definitions for 'TSF Cell 1', 'Wall lift 3', 'Wall lift 4',
- New conditions 1.2.16 and 1.2.17 specify the infrastructure to be constructed at TSF Cell 1. New condition 1.2.18 specifies that <u>wall lift 4 is not authorised at this time</u>.
- New Condition 5.1.7 requiring compliance reporting once construction has been completed.
- New Condition 5.1.8 requiring certified Geotechnical engineer to report on the TSF wall lift construction.
- Amend licence conditions 2.2.1 to reference the most recent current versions of the ONMP revised on 17 August 2018.
- Amend licence condition 3.4.1 TSF bore monitoring parameters and condition 4.1.1 by including two new Improvement Program requirements being;
  - o Independent review of groundwater monitoring
  - o Independent assessment of the TSF water balance
- Include Schedule 2 plan titled "Tailing storage facility general arrangements October 2018 and Embankment sections and details October 2018" in this licence amendment.

Changes to the Licence have been made in accordance with DWER administrative changes including the name, logo and contacts for the Department and redefining terms in the licence.

The Delegated Officer has determined the Galaxy Premises risk remains unchanged following the completion of the upgrades to the modular crusher and process plant circuits, increased production throughput and the operation of the modular crushing plant.

### **Licence Holder's comments**

The Licence Holder was provided with the draft Amendment Notice on 24 December 2018. Comments received from the Licence Holder have been considered by the Delegated Officer as shown in Appendix 2.

#### Amendment

1. New definitions

Definitions of the Licence are amended by insertion of new definitions shown in red text below:

'TSF Cell 1' means the "Tailing Storage Facility Cell 1" as indicated in Schedule 2.

'Wall lift 3' means the "wall lift 3" as indicated in Schedule 2.

'Wall lift 4' means the "wall lift 4" as indicated in Schedule 2. (Note wall lift 4 is not authorised at this time)

2. New Licence conditions

New conditions 1.2.16, 1.2.17, 5.1.7 and 5.1.8 in red text are administrative condition explaining what will be constructed at TSF cell 1 wall lift 3, requiring the construction to be supervised, and certified and then a compliance certificate submitted to the CEO.

- 1.2.16 The License Holder shall construct TSF cell 1 wall lift 3 as indicated by purple colour numbered 3 in Schedule 2 title "Embankment Sections and Detail October 2018" to finish at a stage crest height of 280.3m RL.
- 1.2.17 The License Holder shall complete construction of TSF cell 1 wall lift 3 in accordance with the documentation listed in Table 1.2.16 and as depicted in Schedule 2 titled "Tailing storage facility general arrangements October 2018".
- 1.2.18 Construction of wall lift 4 is not authorised at this time.

| 5. | Complaint Response Protocol | Section 6    |  |
|----|-----------------------------|--------------|--|
| 6. | Monitoring locations        | Appendices A |  |

- 5.1.7 The licence holder must within 30 days of each item of infrastructure required by condition 1.2.17 and table 1.2.17 being constructed:
  - a) undertake an audit of their compliance with the requirements of condition 1.2.17; and
  - b) prepare and submit to the CEO an audit report of that compliance.
- 5.1.8 The audit report required by condition 5.1.7, must:
  - (a) be certified by a suitably qualified professional engineer that each item of infrastructure listed in Table 1.2.16 meets the corresponding specifications and at the locations set out in Table 1.2.16 and has been constructed with no material defects;
  - (b) contain as constructed plans for the works that show the profile of the infrastructure in mAHD and mBGL; and
  - (c) be signed by a person authorised to represent the licence holder and contains the printed name and position of that person within the company.
  - 3. Licence condition 2.2.1 is amended by the deletion of the text shown in strikethrough and the insertion of red text shown below.
  - 2.2.1 The Licensee must ensure that noise is managed in accordance with most recent version of the Galaxy Lithium Australia Limited Mt Cattlin Spodumene Project (formerly-Ravensthorpe) Spodumene Project Operational Noise Management Plan, Revision 5 dated 17 August 2018. (May 2017)
  - 3.4.1 The Licensee must undertake the monitoring in Tables 3.8.1 according to the specifications in that table and record and investigate results that do not meet any limits specified.

| Monitoring point<br>reference and<br>location as depicted<br>in the Premises Map | Parameter                            | Limit | Units  | Averaging period | Frequency  |  |

Note 1: In-field non-NATA accredited analysis permitted

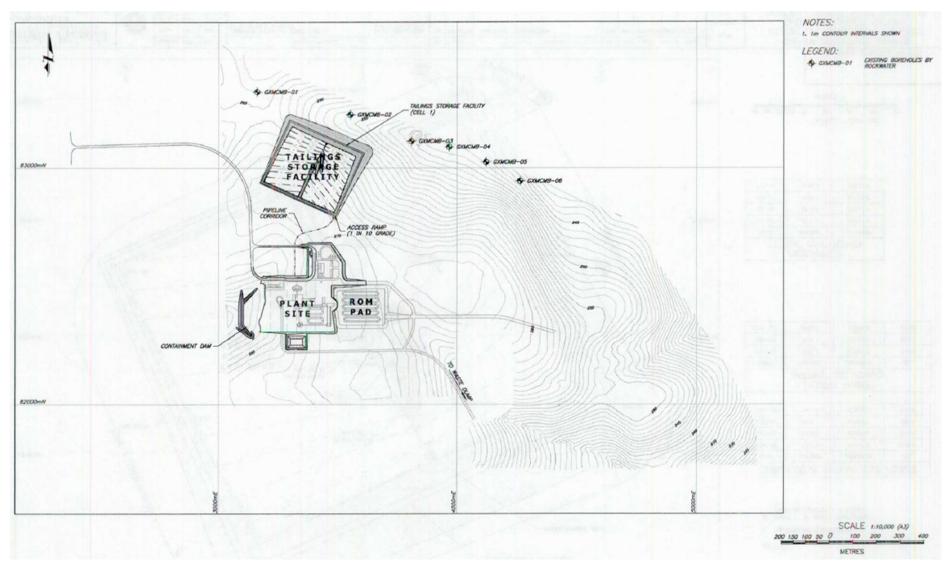

4.1.1. The Licensee shall complete the improvements in Table 4.1.1 by the date of completion in Table 4.1.1.

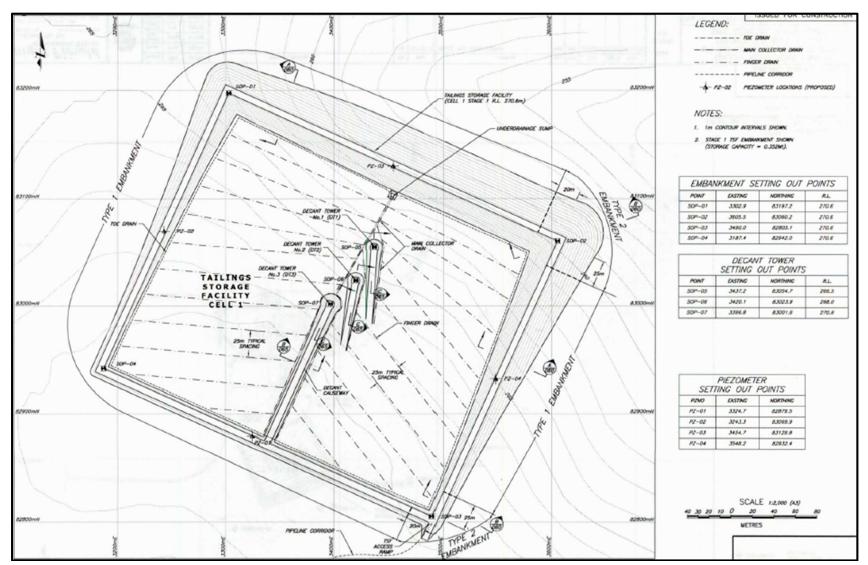

| Table 4.1.1: Im       | provement program  |                       |
|-----------------------|--|-----------------------|
| Improvement reference | Improvement  | Date of<br>completion |
| IR1                   | <ul> <li>The Licensee shall submit an updated Surface Water</li> <li>Management Plan to the CEO. The plan shall include details relating to: <ul> <li>(a) Assessment of capacity of existing stormwater</li> <li>infrastructure to contain runoff from the processing plant, stockpiles, concentrate storage, and laydown areas so that there is zero discharge of contaminated stormwater from the site for a 1 in 100 annual exceedance probability (AEP) storm event over 72 hours;</li> <li>(b) Surface water drainage map of the site showing contours, flow paths and containment cells;</li> <li>(c) If (a) finds existing infrastructure is insufficient, identification of additional infrastructure/operational controls required to ensure no discharges of contaminated stormwater during a 1 in 100 annual exceedance probability (AEP) storm event over 72 hours; and</li> <li>(d) Provision of schedule for constructing additional infrastructure and/or implementing operational controls, if required.</li> <li>(e) Determining impacts of seepage from the temporary tailings stockpile on groundwater quality and groundwater levels.</li> </ul> </li> </ul> | 31 January 2019       |

| IR2 | The Licensee shall submit to the CEO a review of the current<br>groundwater monitoring program. The review shall be carried<br>out by an independent tertiary qualified hydrogeologist and<br>shall consider the adequacy of the groundwater monitoring<br>program, including whether bore sampling is being carried out<br>so as to provide data which is representative of the<br>surrounding groundwater. In particular the review is to<br>determine whether recorded low pH readings and elevated<br>levels of some elements (iron, lithium, boron, and fluoride) are<br>the result of acid sulphate soils or are a sampling artefact due<br>for example to insufficient flushing of bores prior to sampling. | 15 April 2019 |
|-----|--|---------------|
| IR3 | The Licensee shall submit to the CEO a water balance<br>assessment for the tailings storage facility for 2017 and 2018.<br>The assessment is to be prepared by an independent tertiary<br>qualified geotechnical engineer with experience in design,<br>construction and operation of tailings storage facilities. The<br>assessment is to provide both data and an analysis of the data.  | 15 April 2019 |
