

Dam liner replacement for Dams 2 & 3

Dam 2 (450m³) and Dam 3 (1000m³) liners are due for replacement, these were installed prior to 2015.

Replacement of these liners is to ensure we avoid any chance of contamination to water table due to damaged, aged or leaking liners.

Dam 1, will be used to contain all run off leachate from daily operations for the duration of maintenance and replacement of dam liners (14 days)

We have been using the dam 2 for over a year (450m³) without any issues and are confident that the maintenance and installation process will not affect us or our capability of containing our leachate

Should any issue arise we have the resources to contract C Wise into removing and processing any additional leachate water safely and without posing any risk to environment.
