## 1. **Decision summary**

This decision report documents the assessment of potential risks to the environment from emissions and discharges during the construction and operation of the premises. As a result of this assessment, works approval W6836/2023/1 has been granted.

## 2. Scope of assessment

### 2.1 Regulatory framework

In completing the assessment documented in this decision report, the Department of Water and Environmental Regulation (the department; DWER) has considered and given due regard to its regulatory framework and relevant policy documents which are available at <a href="https://dwer.wa.gov.au/regulatory-documents">https://dwer.wa.gov.au/regulatory-documents</a>.

## 2.2 Application summary and overview of premises

On 3 August 2023, GWR Group Limited (the applicant, or GWR) submitted an application for a works approval to the department under section 54 of the *Environmental Protection Act 1986* (EP Act).

The application is to undertake construction works relating to the construction of the C3 Iron Ore Deposit (the project) crushing and screening plant, earthworks for the run-of-mine (ROM) pad, ore product stockpiles, high-density polyethylene (HDPE) lined turkeys' nest and other associated infrastructure at the premises. The premises is approximately 32 km southwest of Wiluna.

GWR Group Limited own the Wiluna West Project which comprises eight iron ore deposits over the two Banded Iron Formation (BIF) ridges (Figure 1). GWR ultimately intend to develop eight iron ore deposits at the Wiluna West Project to establish a 10 million tonnes per annum (Mtpa) project. Two of the deposits, Bowerbird and Joyners Find are located on Unit B and the remaining six (C1 – C5 and CR) are located on Ridge C. The larger iron ore development (10 Mtpa) involves the mining of the C3, C4 and Bowerbird deposits which was approved in 2015. An MP for smaller scale operations at C4 (Stage 1) was approved in May 2020 with mining commencing in December 2020.

GWR has also obtained mining approval for the John William Doutch (JWD) iron ore deposit. GWR has Mining Rights Agreements with Gold Valley Iron Ore Pty Itd for development of the C4 and JWD iron ore deposits where mining commenced in December 2020 and mid-2021 respectively and is ongoing.

GWR now intends to establish an initial smaller scale operation at the C3 iron ore deposit and construct infrastructure to support this development. The premises relates to the category and assessed production / design capacity under Schedule 1 of the *Environmental Protection Regulations 1987* (EP Regulations) which are defined in works approval W6836/2023/1. The infrastructure and equipment relating to the premises category and any associated activities which the department has considered in line with *Guideline: Risk Assessments* (DWER 2020) are outlined in works approval W6836/2023/1.

#### OFFICIAL

Figure 1: Wiluna West Project location and tenure

### 2.2.1 Cushing and screening plant – site preparation and construction

Native vegetation and topsoil will be stripped across the site and stockpiled. Following the removal of the topsoil and material unsuitable for construction purposes, the surface will be rolled with a vibratory roller. Any identified weak areas will be excavated and replaced with granular material to satisfy compaction requirements. Material for this purpose will be sourced from the open pit within the clearing boundary.

Selected granular fill will then be placed over the plant area. This layer will extend at least a metre outside the footprint of the crushing plant on all sides. The ROM, plant and stockpiling area site will be graded to fall to a sump to capture potentially contaminated stormwater.

The final stage of construction involves detailed earthworks, then establishing the modular sections of the mobile plant into position, followed by erection of appropriate signage across the plant to ready it for the commissioning phase.

#### 2.2.2 Commissioning and time limited operations

Commissioning of the crushing plant will commence immediately post mobilisation and installation. The first stage involves progressive testing and commissioning of all systems. The second stage is dry commissioning of the plant, where systems and components are operated without any feed running through the plant. This includes setting the crusher aperture and interlock tolerances and the installation of the screen mats. During dry commissioning, dust suppression sprays will also be tested to ensure functionality.

The final stage of commissioning will see the introduction of feed to the circuit. Adjustments will be made to ensure conveyors and chutes are not overloaded and are functioning correctly. The initial feed rate will be low and gradually increased to nameplate capacity over several days.

Commissioning will be completed within two weeks of installing the crushing and screening plant at the site. Time limited operations are proposed to commence immediately upon the completion of commissioning until the DWER Licence is granted.

#### 2.2.3 Ore processing

The plant will process the ore at rate of 2 Mtpa. All ore will be transported from the open pit to various ROM stockpiles. Ore will be processed through a mobile crushing and screening circuit to produce two distinct ore products, Coarse Ore (Lump) and Fines stockpiles (Figure 3), with a process flowsheet shown in Figure 2.

The product will be stacked in separate stockpiles (Lump and Fines) and selectively removed offsite via road trains to Geraldton Port. The ROM stockpiles will have a total capacity of approximately 100,000 tonnes of ore and are anticipated to be relatively dry. Dust suppression at the ROM will be achieved via a mobile water truck with expected moisture of the ore between 3 - 5% to minimise dust generation. Water sprays will be installed around the plant area to minimise dust generation.

Ore processing will consist of crushing and screening of the ore through a modular plant providing 3-stage crushing and screening and a combination of diesel/electric powered modular mounted crushers, screens and portable conveyors. The plant will be a crushing/screening circuit to reduce the size of the direct shipping ore (DSO) to produce lump ore (32 mm - 6.5 mm) and fines (<6.5 mm)

The ore will be fed into the hopper of the primary crusher using a front-end loader. The crushed material from the primary crusher will then feed directly to a screen, set for a 32 mm split size. The undersize material will report to the secondary screen deck while the oversize material will report to the secondary screen deck while the secondary screen deck will report to the fine's product stockpile and the oversize material will report to the lump product stockpiles.

Two stacker conveyors will transfer ore from the crushing and screening plant onto the Fines and Lump stockpiles. The stacker conveyors will operate with a 300-600 mm wide belt which will be equipped with dust suppression sprays.

Given the crushing/screening plant is a mobile unit, GWR has included provision for relocation of the plant within the overall ROM/plant/ore stockpile area (Figure 3).

### 2.2.4 Diesel and hydrocarbon storage

All hydrocarbons and chemicals will be located within bunded areas or on drip trays to contain any potential spills. Bulk fuel storage will be within a self-contained, double-skinned storage tank.

Waste oil will be stored in a tank and removed from site for recycling by a licensed collection service. Oil filters and hydrocarbon-contaminated rags will be collected in approved receptacles and removed from site to an appropriate facility offsite.

Self-bunded day tanks will be installed to provide fuel to stand-alone diesel generators (e.g., at producing water bore or lighting towers) at their respective locations where required.

The applicant advises all chemical and reagents classed as dangerous goods will be stored in accordance with the requirements of the *Dangerous Goods Safety Act 2004* and the *Dangerous Goods Safety (Storage and Handling of Non-explosives) Regulations 2007*. Spill kits will be available for use to contain any hydrocarbon spills.

Figure 2: Indicative site layout for crushing and screening plant

Figure 3: Proposed layout with prescribed premises boundary

## 2.3 Part IV of the EP Act

The 10 Mtpa Project (disturbance of 2,600 ha), which included the C3 footprint and development envelope, was referred to the EPA in December 2012 and assessed as 'Not Assessed – Public Advice Given' on 22 April 2013.

The applicant does not expect any significant impact to any environment resulting from the project.

## 3. Risk assessment

The department assesses the risks of emissions from prescribed premises and identifies the potential source, pathway and impact to receptors in accordance with the *Guideline: Risk Assessments* (DWER 2020).

To establish a risk event there must be an emission, a receptor which may be exposed to that emission through an identified actual or likely pathway, and a potential adverse effect to the receptor from exposure to that emission.

### 3.1 Source-pathways and receptors

### 3.1.1 Emissions and controls

The key emissions and associated actual or likely pathway during premises construction and operation which have been considered in this decision report are detailed in Table 1 below. Table 1 also details the control measures the applicant has proposed to assist in controlling these emissions, where necessary.

| Emission Sources                |   | Potential pathways   | Proposed controls   |
|---------------------------------|---|--|---|
| Construction                    |   |  |   |
|                                 |   |  | Water trucks will be utilised on roads<br>and during construction activities to<br>control dust as required.  |
| Dust                            | Construction and<br>placement of<br>crushing and<br>screening plant; and<br>earth works for ROM<br>pad / stockpile<br>hardstand,<br>stormwater sump<br>and construction of<br>turkey's nest | Air / windborne<br>pathway smothering  | Daily visual inspections during construction activities will be undertaken to identify excessive visible dust generation.   |
|                                 |   | or vegetation  | Implementation of vehicle speed limits to reduce dust generation.   |
|                                 |   |  | Any dust complaints will be recorded,<br>investigated and remedial action<br>undertaken.  |
| Noise                           |   | Air / windborne<br>pathway disturbing<br>threatened fauna<br>breeding habitats                   | Construction activities will comply with<br>the Environmental Protection (Noise)<br>Regulations 1997.   |
| Sediment<br>laden<br>stormwater |   | Contaminated<br>stormwater and land<br>overflow causing<br>contamination of<br>nearby vegetation | ROM, stockyard, plant, and workshop<br>area to be graded so that rainfall runoff<br>will collect in a sump to prevent<br>potentially contaminated stormwater<br>from the plant and ROM area flowing |

#### Table 1: Proposed applicant controls

| Emission                                 | Emission Sources Potential pathways                     |                                       | Proposed controls   |  |  |  |  |
|--|---|---------------------------------------|---|--|--|--|--|
| a  |   | and soils                             | into the surrounding areas.   |  |  |  |  |
| Commissioning and time limited operation |   |                                       |   |  |  |  |  |
|  |   |                                       | Water to be used for dust suppression is not saline.  |  |  |  |  |
|  |   |                                       | There will be general conditioning of the ore prior to crushing to minimise dust. This will be undertaken with a water cart on the ROM pad.   |  |  |  |  |
|  |   |                                       | Crusher installed with appropriate water sprays to reduce dust generation.  |  |  |  |  |
|  |   | Air / windborne                       | Dust suppression sprinklers and sprays<br>will be installed at the ROM feed<br>hopper, transfer points and on the<br>product stockpile to control levels of<br>fugitive dust.                       |  |  |  |  |
| Dust                                     |   | pathway smothering<br>of vegetation   | The main point at which dust will be<br>generated in the crushing circuit will be<br>at the stackers so GWR propose to<br>have spray points in this area.   |  |  |  |  |
|  |   |                                       | Maximum moisture levels of the final product will be controlled to maintain operational efficiency for road haulage vehicles.   |  |  |  |  |
|  | Screening and<br>crushing of ore; and<br>Stockpiling of |                                       | Water trucks will be used around the plant and on the ROM and roads as required.  |  |  |  |  |
|  |   |                                       | Daily inspection of plant area will include observation of dust assessment and walking of plant site perimeter.   |  |  |  |  |
|  |   | Air / windborne<br>pathway disturbing | Closest sensitive receptor (rural residential dwelling) is located >25 km from the Project.   |  |  |  |  |
| Noise                                    |   | threatened fauna<br>breeding habitats | Operations will comply with the<br>Environmental Protection (Noise)<br>Regulations 1997.  |  |  |  |  |
|  |   | Contaminated stormwater and land      | Ore stockpile and crusher area will be<br>bunded to prevent surface flows outside<br>of this area with all runoffs within this<br>area graded towards a sump.                                       |  |  |  |  |
| Sediment<br>laden                        |   | overflow causing                      | A pump will be available (or watercart) to pump out the sump if it becomes full.  |  |  |  |  |
| stormwater                               |   | nearby vegetation<br>and soils        | Any release which is likely to cause<br>pollution or environmental harm will be<br>reported to the DWER in accordance<br>with Section 72 of the <i>Environmental</i><br><i>Protection Act 1986.</i> |  |  |  |  |
| Contaminated                             | Storage of diesel                                       | Leaks / spills causing                | All hydrocarbons and dangerous goods  |  |  |  |  |

| Emission   | Sources          | Potential pathways  | Proposed controls   |
|------------|------------------|---|---|
| stormwater | and hydrocarbons | direct discharge to<br>land over land flow or<br>infiltration and<br>migration through<br>soil and groundwater<br>causing<br>contamination of<br>vegetation and soils | on site will be stored and handled<br>according to the applicable sections of<br>the Dangerous Goods Safety Act 2004,<br>Dangerous Goods Safety (Storage and<br>Handling of Non-Explosives)<br>Regulations 2007 and Dangerous<br>Goods Safety (Explosives) Regulations<br>2007. |
|            |                  |   | Chemical storage areas will be bunded<br>with a containment capacity equivalent<br>to 110% of the capacity of any tank or<br>25% of the total capacity of an<br>interlinked system.   |
|            |                  |   | Bulk diesel will be stored in self-<br>bunded, double-skinned tanks.  |
|            |                  |   | Regular inspection of bunded areas to ensure capacity is maintained.  |
|            |                  |   | Spillages will be cleaned up and disposed of as per appropriate environmental and safety guidelines and the site's environmental procedure.   |
|            |                  |   | Absorbent materials will be used under<br>machinery which is likely to leak oil<br>while under service or repair in the<br>workshop or on stand-down.   |

#### 3.1.2 Receptors

In accordance with the *Guideline: Risk Assessment* (DWER 2020), the Delegated Officer has excluded the applicant's employees, visitors, and contractors from its assessment. Protection of these parties often involves different exposure risks and prevention strategies, and is provided for under other state legislation.

Table 2 below provides a summary of potential human and environmental receptors that may be impacted because of activities upon or emission and discharges from the prescribed premises (*Guideline: Environmental Siting* (DWER 2020)).

| Table 2: Sensitive human and environmental receptors and distance from prescribed activity |  |  |  |  |  |
|--|--|--|--|--|--|
|  |  |  |  |  |  |

| Human receptors   | Distance from prescribed activity                              |
|---|--|
| No human receptors.   | N/A  |
| Cultural heritage sites   | Distance from activity / prescribed premises                   |
| DWER desktop survey indicated<br>site near project: Wati Kutjarra<br>Tjukurpa Ngurra. | Within 500 m east of the proposed prescribed premises.         |
| Environmental receptors   | Distance from prescribed activity                              |
| Rights in Water and Irrigation Act 1914 (RIWI Act)                                    | Depth to groundwater 30 – 60 metres below ground level (mbgl). |

| East Murchison Proclaimed   | Water Quality from north of M53/1087:  |  |  |  |  |
|---|--|--|--|--|--|
| Groundwater Area.   | -pH from 7.6 to 8.1  |  |  |  |  |
|   | -salinity from 1,011 to 1,496 mg/L TDS   |  |  |  |  |
| Surface water lines   | Minor ephemeral creek line to the east of the proposed prescribed premises.  |  |  |  |  |
| <ul> <li>Nearest surface water bodies:</li> <li>Lake Violet;</li> <li>Lake Way; and</li> <li>Uramurdah Lake.</li> </ul> | Nearest surface water bodies located over 28km east of the proposed prescribed premises.   |  |  |  |  |
| Priority Ecological Community<br>(PEC)  | • <i>Wiluna West vegetation complexes</i> (Priority 1) banded ironstone formation; over the entire premises; and   |  |  |  |  |
|   | Millbillillie Bubble Well calcrete groundwater assemblage type<br>on Cary palaeodrainage on Millbillillie Station (Priority 1);<br>located 13.5km north of the proposed premises – related to<br>subterranean fauna communities.               |  |  |  |  |
| Priority flora:   | Recorded within the proposed premises boundary.  |  |  |  |  |
| Eremophila congesta (P1)  |  |  |  |  |  |
| Ptilotus chrysocomus (P1)   |  |  |  |  |  |
| Homalocalyx echinulatus     (P3); and   |  |  |  |  |  |
| • Prostanthera ferricola (P3).  |  |  |  |  |  |
| Threatened / Priority fauna:  | • Several records of Mallefowl ( <i>Leipoa ocellata</i> ) mounds (6 inactive and 19 old/extinct) within the proposed prescribed premises boundary. There will be a maximum of 6 old/extinct mounds that will be disturbed by this development. |  |  |  |  |
|   | Noting: conditions of CPS include a Malleefowl Management<br>Plan.   |  |  |  |  |
|   | Other species recorded within overall Project area:  |  |  |  |  |
|   | <ul> <li>Malleefowl – (Vulnerable)– to date 110 mounds have<br/>been recorded: 11 active mounds (at the time they were<br/>surveyed); 7 inactive mounds; 92 old/near-extinct/extinct<br/>mounds;</li> </ul>                                    |  |  |  |  |
|   | <ul> <li>Records of Malleefowl mounds (none active) within<br/>the prescribed premises boundary. A maximum of 6<br/>old/extinct mounds will be disturbed by the C3<br/>development.</li> </ul>   |  |  |  |  |
|   | <ul> <li>Brush-tailed Mulgara (<i>Dasycercus blythi</i>) – (Priority 4) –<br/>recorded in spinifex sandplain along the C4 haul road.</li> </ul>  |  |  |  |  |
|   | <ul> <li>Long-tailed Dunnart (Sminthopsis longicaudata) –<br/>(Priority 4) – captured in the C3 east WRD; 700m<br/>southeast of the proposed premises boundary; and</li> </ul>   |  |  |  |  |
|   | <ul> <li>Peregrine Falcon (<i>Falcos peregrinus</i>) – (Vulnerable) – recorded flying over the exploration camp.</li> </ul>  |  |  |  |  |

## 3.2 Risk ratings

Risk ratings have been assessed in accordance with the *Guideline: Risk Assessments* (DWER 2020) for each identified emission source and considers potential source-pathway and receptor linkages as identified in Section 3.1. Where linkages are in-complete they have not been considered further in the risk assessment.

Where the applicant has proposed mitigation measures/controls (as detailed in Section 3.1), these have been considered when determining the final risk rating. Where the Delegated Officer considers the applicant's proposed controls to be critical to maintaining an acceptable level of risk, these will be incorporated into the works approval as regulatory controls.

Additional regulatory controls may be imposed where the applicant's controls are not deemed sufficient. Where this is the case the need for additional controls will be documented and justified in Table 3.

Works approval W6836/2023/1 that accompanies this decision report authorises construction and time-limited operations. The conditions in the issued works approval, as outlined in Table 3 have been determined in accordance with *Guidance Statement: Setting Conditions* (DER 2015).

A licence is required following the time-limited operational phase authorised under the works approval to authorise emissions associated with the ongoing operation of the premises i.e., Category 5 crushing and screening activities. A risk assessment for the operational phase has been included in this decision report, however licence conditions will not be finalised until the department assesses the licence application.

The applicant's controls will be conditioned<br>within the works approval.  |
| Storage of diesel<br>and hydrocarbons | Contaminated stormwater         | Leaks / spills<br>causing direct<br>discharge to land<br>over land flow or<br>infiltration and<br>migration<br>through soil and<br>groundwater<br>causing<br>contamination of<br>vegetation and<br>soils | Priority flora<br>(within prescribed<br>premises)<br>Minor ephemeral<br>water lines<br><i>RIWI</i> groundwater<br>area (30-60 mbgl) | Refer to<br>Section<br>3.1 | C = Minor<br>L = Unlikely<br><b>Medium Risk</b> | Y                       | Condition<br>1, 5, 10             | Unintended spillages or leakage of hydrocarbons<br>and chemicals from vehicle and equipment use,<br>refueling and storage on site have the potential to<br>enter and contaminate the nearby environment.<br>The applicant's controls will be conditioned within the<br>works approval. |

Note 1: Consequence ratings, likelihood ratings and risk descriptions are detailed in the Guideline: Risk Assessments (DWER 2020).

Note 2: Proposed applicant controls are depicted by standard text. Bold and underline text depicts additional regulatory controls imposed by department.

## 4. Consultation

Table 4 provides a summary of the consultation undertaken by the department.

### Table 4: Consultation

| Consultation method   | Comments received  | Department response                                     |
|---|--|---|
| Application advertised on<br>the department's website on<br>11 September 2023   | None received  | N/A   |
| Shire of Wiluna advised of<br>proposal on 5 September<br>2023   | None received  | N/A   |
| Department of Mines,<br>Industry Regulation and<br>Safety (DMIRS) advised of<br>proposal 5 September 2023                               | DMIRS replied on 12 September 2023<br>advising that the works approval<br>application relates to Mining Proposal<br>Reg ID 117069 which is still under<br>assessment by DMIRS. | Noted.  |
|   | DMIRS confirms that the works<br>approval application aligns with the<br>activities proposed in the Mining<br>Proposal.  |   |
|   | DMIRS had no further comments on the works approval application.   |   |
| Wiluna Native Title Holders<br>represented by Tarlka<br>Matuwa Piarku Aboriginal<br>Corporation advised of<br>proposal 5 September 2023 | None received  | N/A   |
| Applicant was provided with<br>draft documents on 17<br>January 2024  | Applicant provided response to<br>department's draft on 9 February<br>2024. Typographic errors were<br>corrected. No further comment was<br>made.                              | The Delegated Officer has corrected typographic errors. |

## 5. Conclusion

Based on the assessment in this decision report, the Delegated Officer has determined that a works approval will be granted, subject to conditions commensurate with the determined controls and necessary for administration and reporting requirements.
