Section F – Details of non-compliance with licence condition

Please use a separate page for each condition with which the licence holder was non-compliant at a time during the reporting period.

Condition number:	7	Date(s) of non-compliance:	14/05/2024
-------------------	---	----------------------------	------------

Details of non-compliance:

Biochemical oxygen demand (BOD) was not able to be analysed in the submitted Q2 samples as high chlorine content led to sample matrix interference. This analyte was sampled on 3 April 2024 and re-sampled on 14 May 2024, both unable to be analysed due to high chlorine content.

What was the actual (or suspected) environmental impact of the non-compliance?

There was no evidence of adverse environmental impact associated with the missed monitoring as all other performance parameters were within the necessary range, and BOD was analysed in other quarters during the reporting period.

Cause (or suspected cause) of non-compliance:

High chlorine content led to sample matrix interference so the analysis could not be conducted by the laboratory for either sample.

Action taken to mitigate any adverse effects of non-compliance and prevent recurrence of the non-compliance:

There were no adverse effects associated with the non-compliance requiring mitigation. In the event of a recurrence of this issue, a re-sample will be taken within the required sampling timeframe to ensure all required parameters are monitored and chlorine set points will be reduced temporarily so that BOD is able to be analysed.
