1 INTRODUCTION

Main Roads Gascoyne over a number of years has slowly been exhausting material stock piles required for road construction and maintenance. Main Roads Gascoyne Region is currently in the process of developing a region wide strategic plan to identify potential future material sites.

The identification of material sites will help the region locate required road building material for road construction and maintenance as well as for use during emergency situations that may arise after events such as cyclones.

2 DESCRIPTION OF THE PROJECT

It is proposed that clearing endorsements be obtained for a potential material pit site within an area along Minilya-Exmouth Road at SLK 174 -175.75. This proposed pit site will be part of the region wide strategic plan to identify material sites for future basecourse materials. The proposed material site is already vested to Main Roads through Section 19 approval.

As the proposed material area is part of a 10 year strategic plan, the area will be systematically cleared and revegetated in relatively small areas (for example 1 or 2 ha) as material is required. In this way, only a small proportion of the material site will be cleared at any one time, with revegetation occurring as soon as the cleared areas are no longer required.

As per Main Roads’ Environmental Assessment and Approval process, the Low Impact Environmental Screening Checklist has been completed for the proposal, refer to Appendix A. As the proposed works involves clearing of native vegetation, the preparation of a project specific Preliminary Environmental Impact Assessment (PEIA) and Environmental Management Plan (EMP) are required. This report fulfils this requirement.

3 PROJECT LOCATION

The location and boundaries of the study area are shown on Figure 1 and include the following features:

- Strategic material pit along Minilya-Exmouth Road, SLK 174 -175.75.
Figure 1: Environmental Clearance Areas for the Material Pit

Study Area
Adjusted Co-ordinates (Zone 50)
A) 198954  7532950
B) 199984  7532627
C) 198480  7531650
D) 199445  7531223
4 METHODOLOGY

4.1 Preliminary Desktop Study

A preliminary assessment of the project area and its potential constraints was undertaken by reviewing a number of government agency managed databases (and consulting where necessary).

4.1.1 Wetlands

The locations of wetlands within the project area was determined using the Commonwealth Department of the Environmental and Heritage (DEH) mapping tool and Department of Environment and Conservation (DEC) Geographic Data Atlas mapping tool (http://apostle.environment.wa.gov.au/idelve/doedataext/index.jsp).

4.1.2 Threatened Flora, Fauna and Communities, Conservation Reserves and ESA

DEC’s database was searched for known populations of threatened flora, fauna and Threatened Ecological Communities (TEC) and conservation reserves, refer to Appendix C.

4.1.3 Air Quality

The need for a local air quality assessment was determined using the criteria outlined in the MRWA environmental guideline, Air Quality.

4.1.4 Heritage

Non-indigenous heritage was examined utilising the Australian Heritage Places Inventory (http://www.heritage.gov.au), Heritage Council of Western Australia (http://register.heritage.wa.gov.au/) and the Shire’s of Carnarvon and Ashburton Municipal Heritage Inventory, refer to Appendix D.

4.1.5 Aboriginal Heritage

A Search of the Department of Indigenous Affairs' (DIA's) (http://www.dia.wa.gov.au/Heritage/SitesSurveysSearch.aspx) database was undertaken to determine whether the project area contains any sites of Aboriginal heritage, refer to Appendix E.

4.1.6 Sensitive Water Resources

The Commonwealth Department of the Environmental and Heritage (DEH) mapping tool and Department of Environment and Conservation (DEC) Geographic Data Atlas mapping tool was used to determine whether the project area supported, or was adjacent to, any significant lakes, rivers or wetlands or proclaimed areas.

4.1.7 Contaminated Sites

The reserve has been in Main Roads continual control; therefore no further work will be required.

4.1.8 Acid Sulfate Soils

The Western Australian Planning Commission’s (WAPC’s) acid sulfate soils maps were reviewed and the self assessment done (http://www.wapc.wa.gov.au/Publications/213.aspx) to determine what level of risk the project area is exposed to, refer to Appendix F.

4.1.9 Weeds

An onsite investigation of the project areas was undertaken to determine whether there are any known populations of declared plants or significant weeds in or adjacent to the project area.
4.1.10 Dieback
Project receives <400 mm of rain so determined not to be an issue.

4.1 Commonwealth Referral
The decision whether to refer the project to the Commonwealth’s DEH was based upon whether the project would impact upon matters of national significance, e.g. World Heritage properties, protected wetlands and migratory species, Commonwealth marine areas, threatened species or communities or nuclear actions (refer to the Commonwealth webpage www.deh.gov.au/epbc/assessmentsapprovals/index.html for further information and the search tool page at http://www.deh.gov.au/erin/ert/epbc/imap/map.html), refer to Appendix I.

4.2 Site Investigation
A site visit was carried out by Crystelle Evangelista (Environment Officer) on 09/07/08 to examine the general features of the area. The broad vegetation types in the vicinity of the project area were identified. Other issues that were considered included topography, the impacts on creek lines, property access and the potential for noise and vibration impacts (dilapidation).

Site photos were taken and are included in Appendix B.

5 EXISTING ENVIRONMENT

5.1 Description
The material pit occurs within vegetation association 662 which is described as "Hummock grassland; shrub steppe; mixed acacia scrub & dwarf scrub with soft spinifex & Triodia basedowii". According to the Native Vegetation Association Data (DEC & DAF) this vegetation association is well represented in the region with 99.3% remaining. The condition of the vegetation is best described as good, but somewhat degraded due to the grazing of cattle and goats.

The following list of species was observed at the proposed projects areas:

- Acacia ancistrocarpa
- Acacia bivenosa
- Acacia gregorii
- Acacia inaequilatera
- Acacia linophylla
- Acacia murryana
- Acacia sclerosperma
- Acacia subtessereoga
- Acacia tetragonoppylla
- Acacia victoriae
- Aristida contorta
- Enekbatus cryptandroides
- Leptosema aphyllum
- Cenchrus ciliaris
- Clerodendrum floribundum
- Corchorus walcotti
- Cullen martini
- Eremophila cuneiforms
- Exocarpos aphyllum
- Grevillea sp.
- Grevillea variifolia
- Hakea candolleana
- Hakea preissii
- Alectryon oleifolius
- Muehlenbeckia cunninghamii
- Stylosbasium spathulatum
- Thryptomene baeckeaceae
- Tribulus platypterus
- Triodia schinzii
- Triodia basedowii
5.2 Site Investigation

6 CLEARING OF NATIVE VEGETATION

Native vegetation describes all indigenous aquatic and terrestrial vegetation (living or dead). The term does not include vegetation that was intentionally sown, planted or propagated unless it was required under a statutory condition.

Apart from activities that are exempt under the clearing regulations, such as clearing vegetation that is less than 10 years old for maintenance, typically all Main Roads clearing will be undertaken using its Statewide Project Purpose Permit.

6.1 Assessment against Clearing Principles

In assessing whether the project is likely to have a significant impact on the environment, the project has been assessed against the DEC’s 10 principles of clearing, refer to Appendix J.

The project is not likely to be at variance with the DEC’s 10 clearing principles.

Where temporary clearing occurs during the course of the proposed project, a copy of the DEC approved generic Main Roads WA – Revegetation Plan for pastoral Areas will be adhered to and a copy placed on the project file.

6.2 Environmentally Sensitive Area (ESA)

<table>
<thead>
<tr>

# 7 ASSESSMENT OF ASPECTS AND IMPACTS

## Table 1: Aspects and Impacts – Material Pit – Minilya-Exmouth Road – SLK 174-175.75

<table>
<thead>
<tr>
<th>Aspect</th>
<th>Evaluation of Potential Impacts</th>
</tr>
</thead>
<tbody>
<tr>
<td>Air quality</td>
<td>Not relevant to the proposed works. Local air quality assessment is not required for the project since: * the predicted traffic flow is less than 10,000 vehicles per day (in urban areas) or 15,000 vehicles per day in rural areas; and;* residential and other sensitive receptors are not within 200 meters of the road centre.</td>
</tr>
<tr>
<td>Dust</td>
<td>Likely to be a minor issue during earthworks. No major sensitive receivers adjacent to the proposed works.</td>
</tr>
<tr>
<td>Fauna</td>
<td>No significant fauna issues associated with any of the proposed upgrade works.</td>
</tr>
<tr>
<td></td>
<td>DEC website search resulted in the Black-flanked Rock-Wallaby, Marbled Toadlet, Australian Bustard, and Western Star Finch as possibly occurring within the project area. The proposed project areas however do not cover the habitat areas for these species.</td>
</tr>
<tr>
<td></td>
<td>No Matters of National Environmental Significance as protected under EPBC Act (1999) will be impacted. The Mulgara was listed as possibly occurring within the area, but given the small clearing areas no impacts are expected.</td>
</tr>
</tbody>
</table>
| Vegetation – clearing   | • As the proposed material area is part of a 10 year strategic plan, the area will be systematically cleared and revegetated in relatively small areas (e.g. 1 or 2 ha) as material is required.  
  • The project will involve temporary clearing and revegetation will be undertaken in accordance with the DEC approved Main Roads’ Revegetation Plan for Pastoral Areas.  
  • The condition of the native vegetation to be cleared is good.  
  • The native vegetation will be cleared is well represented regionally with 99.3% pre-European extent remaining.  
  • The native vegetation to be cleared does not occur within an ESA.  
  • The native vegetation to be cleared will be done so using the purpose permit. |
| Vegetation – TEC/DRF    | Consultation with DEC confirms that there are no TEC with the project area.                                                                                                                                                                                                                                                                                      |
|                         | No DRF species have been identified within the vicinity of the project area.                                                                                                                                                                                                                                                                                      |
|                         | Numerous priority flora species have been identified to occur within the vicinity of the project area. A flora survey of the proposed project site was conducted in August 2008 to determine if any rare or priority flora species are present within the project area. This flora survey will minimise the impacts of this project on priority flora species. |
|                         | No Matters of National Environmental Significance as protected under EPBC Act (1999) will be impacted.                                                                                                                                                                                                                                                          |
| Vegetation – weeds      | Numerous common weed species occur throughout the proposed works areas. These species are likely to be widespread within the reserve and general area. The risk of spreading these weeds species as part of the proposed work should be minimised. Standard weed hygiene measures should be applied for all earthworks in the area, including ensuring that plant and equipment brought on to the site are clean of soil. |
| Vegetation – dieback    | Not an issue given the project area receives less than 400 mm of average annual rainfall or is above the 26˚ parallel.                                                                                                                                                                                                                                              |
| Reserves / Conservation areas | There are no conservation areas or reserves adjacent to the project area.                                                                                                                                                                                                                                                                                       |
| Heritage (non-indigenous) | A search of the Australian Heritage Places Inventory, Heritage Council of Western Australia and the Shire of Carnarvon’s Municipal Heritage Inventory on-line databases has indicated that there are no heritage significance listed sites present in the currently proposed works areas.                                                                                                                             |
|                         | No Matters of National Environmental Significance will be impacted.                                                                                                                                                                                                                                                                                        |
Table 1: Aspects and Impacts – Material Pit – Minilya-Exmouth Road – SLK 174 -175.75

<th>Evaluation of Potential Impacts</th>
</tr>
</thead>
<tbody>
<tr>
<td>Aboriginal heritage</td>
<td>A search of DIA database identified no known sites of Aboriginal heritage significance within close proximity to the project area.</td>
</tr>
<tr>
<td>Surface water/drainage</td>
<td>On-site visit and DoW search confirmed that the proposed works will not interrupt any natural drainage and surface run-off patterns.</td>
</tr>
<tr>
<td>Wetlands</td>
<td>There are no wetlands within the vicinity of the project areas.</td>
</tr>
<tr>
<td>Groundwater</td>
<td>No dewatering nor drainage modifications are required, hence no change to groundwater level or quality.</td>
</tr>
<tr>
<td>Noise and vibration</td>
<td>Construction works is not expected to significantly contribute to noise levels at the nearest sensitive receivers, provided works are limited to normal working hours. The requirements of the Shire of Exmouth must be met in respect to noise management and construction working hours.</td>
</tr>
<tr>
<td>Visual amenity</td>
<td>The proposed works will result in minor and short-term visual impacts during construction. Revegetation of the temporary cleared area will ensure no visual impacts result due to works.</td>
</tr>
<tr>
<td>Public safety and risk</td>
<td>Provided traffic management and signage to Main Roads standards is employed, none of the proposed works present any significant hazards to public safety.</td>
</tr>
<tr>
<td>Hazardous substances</td>
<td>Not relevant to the proposed works.</td>
</tr>
<tr>
<td>Contamination</td>
<td>Given the relatively superficial nature of the required earthworks, there appears to be a low risk of any significant contamination issues.</td>
</tr>
<tr>
<td>Salinity</td>
<td>Given the nature and scale of the project the impact is not relevant.</td>
</tr>
<tr>
<td>Acid Sulfate Soils</td>
<td>The WAPC’s self-assessment (Planning Bulletin 64) indicates that no further soil investigation is required for the project.</td>
</tr>
<tr>
<td>Statutory Land Use Planning</td>
<td>As the proposed works are likely to take place outside the existing road reserve, prior to construction, development approval from the Western Australian Planning Commission should be sought.</td>
</tr>
</tbody>
</table>

8 DECISION TO REFER

Given the scale of the project, the low significance of its impacts to the surrounding environment and the environmental management measures proposed, the project does not require referral to the WA Environmental Protection Authority or the Commonwealth Department of the Environment and Heritage.

10 ENVIRONMENTAL MANAGEMENT PLAN

This section of the report (the EMP) has been developed for the project area following the completion of the above sections. The main aim of this EMP is to provide a management plan to assist in minimising the environmental impacts of the activities associated with the proposed works and identify who is responsible for the implementation of the management strategies.

This EMP will only address the actions already listed as well as any site-specific issues that were identified during the PEIA. The project specific management measures identified within this EMP are in addition to the standard specifications used for Category 2 projects. The environmental management measures/conditions in Main Road’s Specifications 203, 204, 301, 302 and 304 are still to be followed where applicable.

The areas that require special management will be addressed in terms of:

- the timing of the various management actions;
- the topic (e.g. vegetation);
- the objectives for each area;
- the actions that are necessary to minimise the impact;
- the responsible party for implementing the action; and
- whether the action arose from external advice or is a Main Roads requirement.

10.1 Communication Plan

Environmental issues specific to the project will be communicated as follows:

<table>
<thead>
<tr>
<th>Method</th>
<th>Frequency</th>
<th>Participants</th>

**Pre-Construction**

- **Aboriginal heritage**
  - Ensure that there is no unauthorised disturbance to Aboriginal heritage sites during construction.

**Objective**

To ensure the retention of as many habitat trees, shrubs and vegetated corridors for fauna as possible, particularly where associated with riparian zones.

**Action**

- If any materials of significance to Aboriginal people are discovered, works will immediately cease within 100m of the material and the site will be examined by a qualified archaeologist.
- The DIA will be notified in the event of any significant Aboriginal heritage discovery.
- If skeletal material is uncovered during works the WA Police Service will also be advised immediately.

| Construction | Weeds | Prevent and reduce the introduction and spread of weeds | Control any weed species, if present, within the project area prior to construction to limit the amount of propagative material that may be spread during disturbance. The following machinery and vehicle hygiene measures will be utilised to avoid the inadvertent spread of weeds within any project areas:  
  • All site employees will be advised of the hygiene measures  
  • All clearing, topsoil stripping and gravel cartage activities will be conducted under dry soil conditions  
  • Dust adhering to the sides of vehicles does not need to be removed  
  • All construction plant and machinery should be cleaned free of soil and vegetative material prior to arrival and prior to departing the project site.  
  • Clean down will comprise of the use of a brush and/or compressed air to remove clumps of soil and/or soil water slurry. A metal bar or spade will be used to remove compacted soil where necessary. | Contractor | Main Roads |

If a new weed infection is identified within the area, measures to reduce its spread should be established.

Low Impact Environmental Screening Checklist
Checklist - Low Impact Screening Checklist

The Low Impact Screening Checklist is part of the environmental assessment and approval process, refer to in Figure 2 in the Main Roads environmental guideline Environment Assessment and Approvals. It should be noted that the checklist does not address Aboriginal heritage issues. Please refer to Main Roads guideline Aboriginal Heritage for the heritage assessment process.

All projects are to be screened to identify those that are Low Impact.

Projects that have "No" to all items are classed as Low Impact and should be implemented using standard contract clauses in the Tender Document Process.

Projects that have "Yes" to any item will require further environmental assessment and will be implemented using an Environmental Management Plan.

Tick "Yes" or "No" for every item.

**Project Name:** Material Pit located on Minilya-Exmouth Road, SLK 174 – 175.5

Australian Heritage Places Inventory, Heritage Council of Western Australia and the Municipal Heritage Inventory Database Searches
Australia’s heritage

Heritage is all the things that make up Australia’s identity - our spirit and ingenuity, our historic buildings, and our unique, living landscapes. Our heritage is a legacy from our past, a living, integral part of life today, and the stories and places we pass on to future generations.

Find a heritage place:
- New South Wales
- Victoria
- Queensland
- South Australia
- Western Australia
- Tasmania
- Northern Territory
- Australian Capital Territory
- All of Australia
- World heritage
- National Heritage
- Commonwealth heritage

Search for heritage places:

- Asia Pacific Legal Film
- Australia’s dinosaur
- Australian Heritage Council
- Australian Heritage Places
OTHER REGISTER INFORMATION:

WHAT IS THE STATE REGISTER?
OTHER HERITAGE LISTS

There are two different lists you can search.

The State Register of Heritage Places recognizes a place's value and importance to Western Australia. The Register includes buildings, structures, gardens, cemeteries, landscapes and archaeological sites and has more than 1,600 places on it. The Register is managed by the Heritage Council and provides a place with statutory protection to ensure it is conserved into the future.

The Places Database includes places listed in the State Register as well as those included in a Local Government's Municipal Inventory, the Commonwealth's Register of the National Estate and the National Trust's List of Classified Places. There are more than 17,500 places on the Places Database.

To do a search simply enter the details of the place, select whether you want to search the State Register or the Entire Database, and click the 'Search' button below.

It is important to note that the entry of a place in the State Register of Heritage Places does not make the place available for public access.

If you need further advice on whether a property is heritage listed, please call the Heritage Council on 9221 4177.

Spatial Accuracy

Index coordinates are indicative locations and may not necessarily represent the centre of sites, especially for sites with an access code "closed" or "vulnerable". Map coordinates (lat,Long) and (Easting/ Northing) are based on the ODA 64 datum. The Easting / Northing map grid can be across one or more zones. The zone is indicated for each Easting on the map, e.g. "5000000.250" means Easting=5000000, Zone=50.

Appendix G

WAPC’s Acid Sulfate Soils Mapping
Acid Sulfate Soils
Applicant Self-Assessment Form

Important Information for applicants
This form must only be completed if there is evidence of significant risk of disturbing acid sulfate soils at this location or having completed Form 1A - Application for approval of land subdivision or survey estate. If you have indicated yes to either question 1 or 2, Acid sulfate soils assessment, section 7.

Applicant
The applicant is the person with whom the WAPC will correspond and, if the application is approved, the person to whom the approval will be sold.

Full name: Crystalie Evangelista

Applicant signature

Applicant property details
Strategic Material Area - Minilya - Exmouth Road SLK 174 - 175.5

Step 1
If you have previously indicated yes to question 1 or 2 on Form 1A go to Step 2.

Is there evidence of a significant risk of disturbing acid sulfate soils at this location?
The WAPC has published maps showing the levels of risk of acid sulfate soils. These maps are shown on pages 1 to 29 of the planning bulletin no. 64, which can be downloaded at www.wapc.wa.gov.au/bulletins

Question 1: Do figures 1-29 of the WAPC’s Planning Bulletin No. 64 Acid Sulfate Soils show the land as having a high to moderate risk of acid sulfate soil occurring within 3 m of natural soil surface? □ yes □ no

Question 2: Is the land located in an area, whether depicted in figure 1-29 or not, where site characterisation and local knowledge lead you to form the view that there is a significant risk of disturbing acid sulfate soils at this location? □ yes □ no

If yes to either of these questions go to step 2.

If no to both of these questions then no further investigation is required. Sign this form and submit it with your application together with the written results of the preliminary site assessment.

Step 2
Are any of the following works proposed, or likely to be carried out, on the land?

Question 3: Are any earthmoving works proposed to be undertaken? □ yes □ no

Question 4: Is the daily excavation of > 100 m³ of soil proposed? (To 10 standard dump truck loads) □ yes □ no

Question 5: Is the daily excavation of > 200 m³ of soil proposed? (To 10 standard dump truck loads) with an excavation depth of > 2 m? □ yes □ no

If yes to any of these questions go to step 3.

If no to all of these questions no further investigation is required. Sign this form and submit it with your application.

Step 3
Carry out preliminary site assessment in accordance with Department of Environment and Conservation guidelines.

Note: Copies of documents in the acid sulfate soils guideline series and further technical advice and information can be obtained from contaminated sites page on the Department of Environment and Conservation’s website at http://www.dec.wa.gov.au

Question 6: Did the preliminary site assessment reveal the presence of acid sulfate soils? □ yes □ no

If yes to this question go to step 4.

If no to this question then no further investigation is required. Sign this form and submit it with your application together with the written results of the preliminary site assessment.

<tr>
<td>Revegetation description:</td>
<td>Replacement of topsoil material regeneration.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Reason for revegetation:</td>
<td>Revegetation of temporary cleared areas, in accordance with condition 14 of clearing permit CPS 818.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Revegetation / rehabilitation requirements:</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Site preparation:</td>
<td>All vegetation will be cleared from the works area and non-weed infested vegetation is stockpiled. Stockpiled vegetation will be placed in a manner that will prevent damage to adjacent vegetation by machinery. Weed infested vegetation will be disposed of at an appropriate site and not used for revegetation purposes. Burning of the cleared vegetation will not be permitted. Topsoil will be stripped to a maximum depth of 100mm, and will be stored in a weed free (as far as possible) area, as close as possible to the area to be rehabilitated. Topsoil will be placed in windrows of less than 1.5m in height and reinstated as soon as practicable to maintain viability of in-situ seeds.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Weed control:</td>
<td>Appropriate weed control will be carried out when weeds are present, both prior to topsoil stripping and where weeds become established on or between the stockpiled materials. Weed control will take place prior to the respreading of topsoil to ensure weeds are killed and not transported to other areas. Control measures include the removal of weeds to an approved dumpsite, or treatment of weeds such as by using herbicides mixed in accordance with manufacturer’s instructions and applied by a licensed operator. Where practicable, weeds will be removed prior to or when they are in flower, and prior to seeding. All machinery will be cleared of soil build up and vegetative material before entering and leaving the site to help minimise the transportation of weeds and their seeds. Exposed areas such as bare batters and borrow pits shall be promptly rehabilitated to reduce the potential for weed establishment. Where works are adjacent to good quality vegetation, where weeds from within the project area are likely to spread to and result in environmental harm to the adjacent area, those weeds will be controlled annually until 12 Dec 2010.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
**Regeneration / direct seeding / planting at an optimal time:**

The following rehabilitation works are undertaken on areas of disturbed earth requiring rehabilitation:

- Topsoil is uniformly respread to a typical depth of 100mm over the project area. In project areas where topsoil has not been removed and/or is not available, other substrate, such as gravel, may be substituted as a growth medium.

- Project areas will be ripped to a minimum depth of 200mm deep with rip lines approximately 300mm apart. Where slopes are present, rip lines shall follow natural contours.

The following rehabilitation works are undertaken at borrow / gravel pits:

- Overburden and then topsoil will be uniformly and evenly spread over the disturbed areas of the pit. Depending on the slope of drainage lines within the pit, small swales from the topsoil will be formed to reduce erosion velocities and encourage the deposition of seeds.

- The whole of the existing pit floor, including drainage lines, will be ripped to a depth of 300-500mm deep with rip lines between 500-800mm apart (if the material in the pit is able to be ripped).

- All stockpiled vegetation will be spread along the contour and the pit floor to help promote seed deposition and to reduce erosion velocities.

**Vegetation establishment period:**

The vegetation establishment period is for at least twelve months following the completion of the works. During this period, maintenance and monitoring will be undertaken (see below).

**Ongoing maintenance and monitoring:**

After revegetation works, revegetated areas will be inspected annually for a minimum of two years to monitor and control weeds and to measure the effectiveness of revegetation works.

When unwanted weed foliage cover exceeds 25% after the initial two year period, further actions will be implemented to monitor and control these weeds. The additional monitoring and weed control will be conducted annually until 12 Dec 2010 or until the unwanted weed foliage cover falls below 25%, whichever is sooner.

**Monitoring commitments:**

*Post revegetation site inspections will be carried out annually for a minimum of two years to monitor unwanted weeds and measure the effectiveness of revegetation works. Monitoring of sites where unwanted weed foliage cover exceeds 25% after the initial two year period will continue annually until 12 Dec 2010 or until the unwanted weed foliage cover falls below 25%, whichever is sooner.*

**Management commitments:**

Undertake annual weed control of unwanted weeds annually until 12 Dec 2010 or until the unwanted weed foliage cover falls below 25%, whichever is sooner.

**Agencies consulted and submissions received:**

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Information on the coverage of this report and qualifications on data supporting this report are contained in the caveat at the end of the report.

You may wish to print this report for reference before moving to other pages or websites.

The Australian Natural Resources Atlas at http://www.environment.gov.au/atlas may provide further environmental information relevant to your selected area. Information about the EPBC Act including significance guidelines, forms and application process details can be found at http://www.environment.gov.au/epbc/assessmentsapprovals/index.html

**Other Matters Protected by the EPBC Act**

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place and the heritage values of a place on the Register of the National Estate. Information on the new heritage laws can be found at http://www.environment.gov.au/heritage/index.html.

Please note that the current dataset on Commonwealth land is not complete. Further information on Commonwealth land would need to be obtained from relevant sources including Commonwealth agencies, local agencies, and land tenure maps.

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species. Information on EPBC Act permit requirements and application forms can be found at http://www.environment.gov.au/epbc/permits/index.html.

### Caveat

The information presented in this report has been provided by a range of data sources as acknowledged at the end of the report.

This report is designed to assist in identifying the locations of places which may be relevant in determining obligations under the *Environment Protection and Biodiversity Conservation Act 1999*. It holds mapped locations of World Heritage and Register of National Estate properties, Wetlands of International Importance, Commonwealth and State/Territory reserves, listed threatened, migratory and marine species and listed threatened ecological communities. Mapping of Commonwealth land is not complete at this stage. Maps have been collated from a range of sources at various resolutions.

Not all species listed under the EPBC Act have been mapped (see below) and therefore a report is a general guide only. Where available data supports mapping, the type of presence that can be determined from the data is indicated in general terms. People using this information in making a

Appendix J

Vegetation Clearing Assessment Report
This report has been prepared to assist MRWA in addressing condition 7 “Assessment of Clearing Impacts” under Clearing Permit CPS 818/3.

For guidance on how to complete the form, refer to DEC completed reports (active permits) at http://203.20.251.100/cps_reports/.

### AREA UNDER ASSESSMENT DETAILS

**Proponent details**

**Proponent’s name:** MRWA Gascoyne Region  
Name: Crystelle Evangelista

<td>Mechanical</td>
<td>Material extraction</td>
<td></td>
</tr>
</tbody>
</table>

**Avoidance/Minimise clearing**

How have the clearing impacts been minimised?  
Flora surveys will be conducted to minimise impacts to rare flora.

### BACKGROUND

**Existing environment and information**

The material pit occurs within vegetation association 662 which is described as “Hummock grassland; shrub steppe; mixed acacia scrub & dwarf scrub with soft spinifex & Triodia basedowii ”. According to the Native Vegetation Association Data (DEC & DAF) this vegetation association is well represented in the region with 99.3% remaining. The condition of the vegetation is best described as good, but somewhat degraded due to the grazing of cattle and goats.

**Methodology**

- Site visit – 09/07/08
- DEC advice – 17/07/08

### ASSESSMENT OF APPLICATION AGAINST CLEARING PRINCIPLES

#### (a) Native vegetation should not be cleared if it comprises a high level of biological diversity.

**Comments**

Proposal is not at variance to this Principle  
The area under application generally consists of grasses and a few scattered shrubs. The condition of the vegetation is somewhat degraded and does not represent a high level of biodiversity. This proposal is therefore not at variance to this Principle

**Methodology**

- Site visit – 09/07/08

#### (b) Native vegetation should not be cleared if it comprises the whole or a part of, or is necessary for the maintenance of, a significant habitat for fauna indigenous to Western Australia.

**Comments**

Proposal is not likely to be at variance to this Principle  
Due to the relatively small clearing areas necessary at any one time for this proposal and the high percentage of similar vegetation in surrounding areas, impacts to fauna species will be marginal. This proposal is therefore not at variance with this Principle.

**Methodology**

- Site visit – 09/07/08
- DEC advice – 17/07/08
<table>
<thead>
<tr>
<th>(c)</th>
<th>Native vegetation should not be cleared if it includes, or is necessary for the continued existence of, rare flora.</th>
</tr>
</thead>
</table>
| **Comments** | Proposal is not likely to be at variance to this Principle  
DEC Threatened Flora Database search was conducted and no rare flora species were known to exist within the project area. A flora survey of the proposed project site was conducted in August 2008 to determine if any rare or priority flora species are present within the project area. The flora survey will minimise the impacts of this project on priority flora species. |
| **Methodology** | Site visit - 09/07/08  
DEC advice – 11/07/08 |

<table>
<thead>
<tr>
<th>(d)</th>
<th>Native vegetation should not be cleared if it comprises the whole or a part of, or is necessary for the maintenance of a threatened ecological community.</th>
</tr>
</thead>
</table>
| **Comments** | Proposal is not at variance to this Principle  
There are no Threatened Ecological Communities within the vicinity of the project area. This proposal is therefore not at variance to this Principle. |
| **Methodology** | GIS database – Threatened Ecological Communities  
DEC Advice – 11/07/08 |

<table>
<thead>
<tr>
<th>(e)</th>
<th>Native vegetation should not be cleared if it is significant as a remnant of native vegetation in an area that has been extensively cleared.</th>
</tr>
</thead>
</table>
| **Comments** | Proposal is not at variance to this Principle  
The vegetation within the project areas is representative of Vegetation Association No.662 which has 99.3% of the pre-European extent remaining. This vegetation association is therefore of “least concern” for biodiversity conservation. This proposal is therefore not at variance with this Principle. |
| **Methodology** | GIS – NRM Slip Native Vegetation Association |

<table>
<thead>
<tr>
<th>(f)</th>
<th>Native vegetation should not be cleared if it is growing in, or in association with, an environment associated with a watercourse or wetland.</th>
</tr>
</thead>
</table>
| **Comments** | Proposal is likely to be not at variance to this Principle  
The proposed project area does not consist of a watercourse or wetland. This proposal is therefore not at variance to this Principle. |
| **Methodology** | Site visit – 09/07/08  
GIS Database – Acid Sulfate Soils Risk Map |

<table>
<thead>
<tr>
<th>(g)</th>
<th>Native vegetation should not be cleared if the clearing of the vegetation is likely to cause appreciable land degradation.</th>
</tr>
</thead>
</table>
| **Comments** | Proposal is not likely to be at variance to this Principle  
The proposed project will only involve the temporary clearing of small area of vegetation. Revegetation of disturbed areas will occur in accordance with Main Roads’ Revegetation Plan for Pastoral Areas that has been approved by DEC. As revegetation of cleared areas will occur as soon as practical, land degradation will be limited. This proposal is therefore not at variance with this Principle. |
| **Methodology** | Site visit – 09/07/08 |

<table>
<thead>
<tr>
<th>(h)</th>
<th>Native vegetation should not be cleared if the clearing of the vegetation is likely to have an impact on the environmental values of any adjacent or nearby conservation area.</th>
</tr>
</thead>
</table>
| **Comments** | Proposal is not likely to be at variance to this Principle  
The proposed project is not near any conservation areas and therefore will not be at variance with this Principle. |
| **Methodology** | Site visit – 09/07/08 |
(i) Native vegetation should not be cleared if the clearing of the vegetation is likely to cause deterioration in the quality of surface or underground water.

Comments
Proposal is not at variance to this Principle
The area under application receives less than 400 mm of annual rainfall. Due to the low rainfall rate, the proposal will not cause deterioration in the quality of surface or underground water and therefore will not be at variance to this Principle.

Methodology
Site visit - 09/07/08

(j) Native vegetation should not be cleared if clearing the vegetation is likely to cause, or exacerbate, the incidence or intensity of flooding.

Comments
Proposal is not at variance to this Principle
The soil consists of deep sandy soils. In addition, the area under application receives less than 400 mm of annual rainfall. Due to the nature of the soils and the low rate of rainfall, the proposal will not exacerbate the incidence of flooding and therefore is not at variance with this Principle.

Methodology
Site Visit – 09/07/08

Planning instrument, Native Title, RIWI Act Licence, EP Act Licence, Works Approval, Previous EPA decision or other matter.

ASSESSOR'S RECOMMENDATIONS

List of Principles seriously at variance, at variance or maybe at variance

Recommendation: As the proposed project will involve temporary clearing, a revegetation management plan is required. An Environmental Management Plan has been included in the PEIA and a Flora Surveys will be conducted over the entire project area.
